

1 Jira Link:

<https://calstatela-team-uqomn8ag.atlassian.net/jira/software/projects/FS/boards/133>

2 Objectives:

The QTC Workflow Queue (WFQ) Administrator Application is a web-based tool for authorized technical administrators to create, configure, and manage workflows used by the QTC WFQ system. It interacts directly with the existing WFQ SQL Server database and is built using ASP.NET Core MVC with C# and Entity Framework.

Our team is using this project as a structured template to practice the full software development life-cycle — from requirements and design documentation through implementation, testing, and deployment tooling.

3 Access / Download Instructions:

As of May 15, 2025, there is formal access to the QTC Workflow Queue (WFQ) Administrator Application.

The following link has more information in regards to the progress of the project overall: <https://ascent.cysun.org/project/>
